

Active Magnetics Research Pty Ltd

MAGNET VALIDATIONS ENDORSED BY HACCP INTERNATIONAL

Active Magnetics Research is an approved provider of endorsed magnet validations and verifications for existing magnets in the food industry.

Both equipment used for the magnet validation and the actual magnet validation documentation are endorsed by HACCP International.

Magnet validations are very important especially on last point, CCP and critical packing magnets as they establish if the magnet is within tolerance. An Endorsed magnet validation report should be provided initially by the magnet supplier then conducted every year on final and CCP magnets.

Magnet validations should be performed at least every 2 years on intakes and plant protection magnets.

Magnet validations must be carried out using currently calibrated gauss meters using properly endorsed procedures and documentation. HACCP audits now mostly require both magnets & metal detectors to be validated before approval is awarded.

Finally, the older "pull test" approximations are declining in acceptability where product and brand name security is an important concern.
